

JACKAL CALLING WITH ELECTRONIC & HAND CALLER

Here is a plan you can do with an electronic if you have an electronic caller and a hand caller, you can use the two to create a storyline for our famous Mr Jackal.

The bakkie is pulled OFF the road, the electronic is placed downwind at 150m away – 50m away from road at a 45degree angle and you sit on the truck with a hand caller. The big gap allows the kakals to come in between the bark and rabbit to smell you, and allows you time to klap him before he gets that far, by shooting him while he shows up and starts to work under the wind. **Klap him while he moves in the blue section.** The **RED X** is 3 bottles of gland lure that are placed downwind to hide your smell, **taken only from a female jackal.** Play vocal jackal bark once every 15 minutes, and food with hand caller of rabbit 5 seconds on every 1 minute, never overcall.

See our site for the new **DIGITAL ELECTRONIC ATTRACTOR** made in South Africa.
