

M-14 LED LENSER

Jakkals jag met die LED LENSER M-14, dit werk moersa!

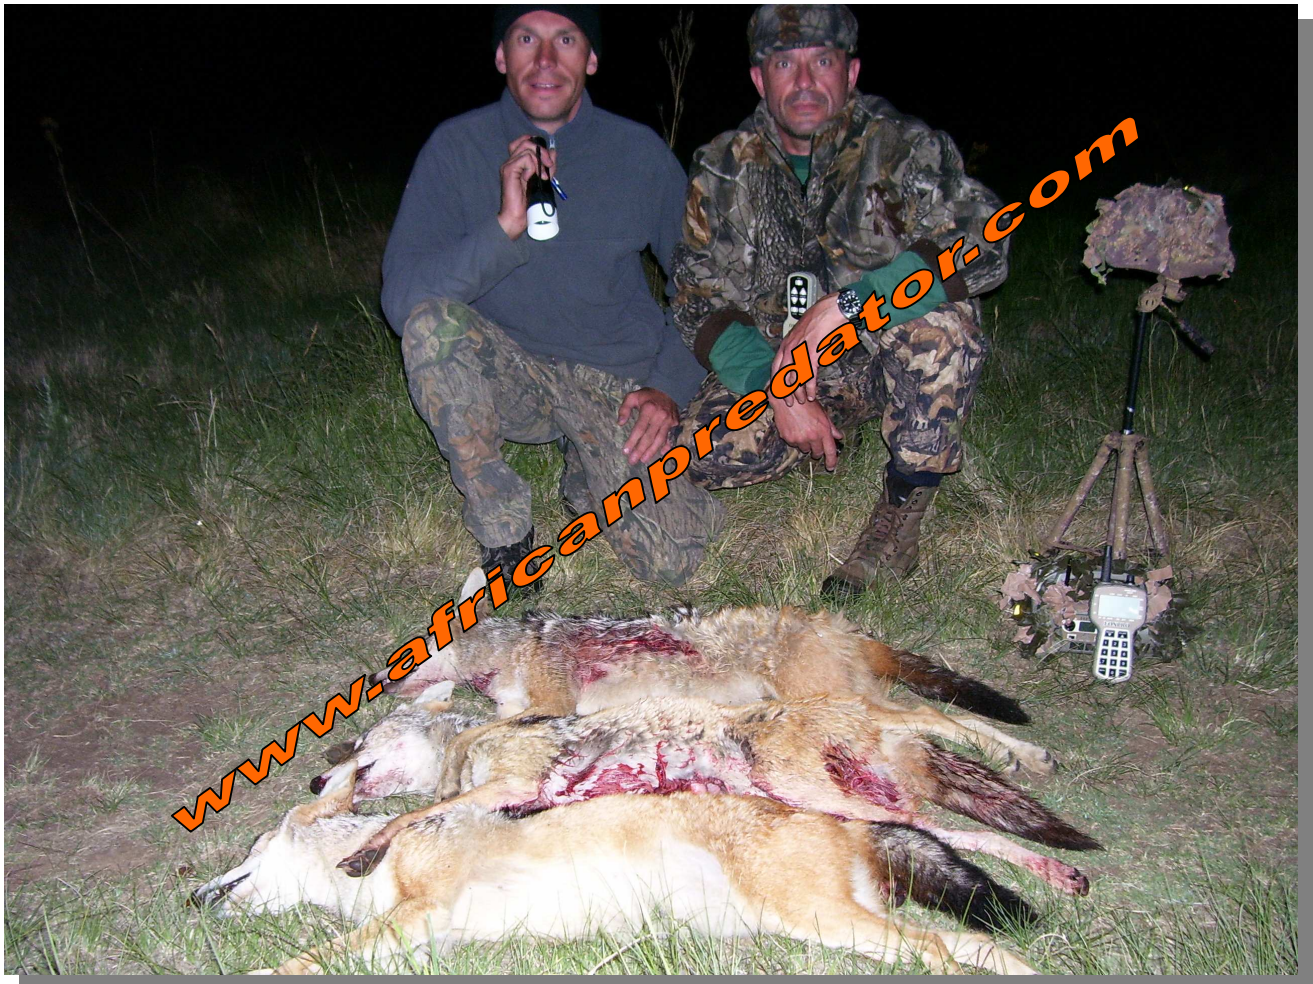

My partner who operates the Kuruman areas first used this amazing torch, and he is the reason WHY I also use this torch.

I fitted it with my photographic red lens, and now I can scan with it, and shoot out to 100m with it, if the red lens is removed it can help you with shots far far away, it also has a built in dimmer, lekker gooiable torch!

Here is a few pics of the set up for late / early morning calling the last hour before the morning light appears, here we shot 3 jackal and a cat, all at the same stand within 45minutes.

We used the M-14 to scan and shoot two jackal, the other one was klapped longer range with a bigger light on the gun, as shown. **NOTE M14 on chair next to the big light – this is one awesome light.** Also note the flip up red lens on the scope light.

Here you can see the light in Everts hand, it has a exhaust pipe to throw the light straight and not backwards to light up everything else.

**Grab a LED
LENSER M-14
you wont be
sorry!**

Here is a picture of a big cat we called - also used the M-14 for this pussy cat, we actually shot two together but could not find the other one.
