

GET CLOSER TO WILDLIFE

Get closer to wildlife, by making simple covers to cover the trucks lights, it does work!

Simply cut out a few square cardboard squares that fit the lights, then cut out the centre with about an inch width, paste red lenses behind and fit another cardboard cutout behind it. Then staple them and whaaala - done.

By using these covers allows you to move around at night and you will see you can drive past game slowly and you wont spook them easily, you will get far closer than what you would have done with white lights.
